PIACITELLI TECHNOLOGIES S.A.S.  
Engineering, Manufacturing & Training

## ABOUT

PIACITELLI TECHNOLOGIES S.A.S. started as a one-man business in 2016, aiming to fulfil its customers' needs.

The company grew fast supplying qualified resources and competency, and today it counts on more than twenty skilful developers, specialised in different branches, in order to cover the entire development cycle, from design to industrialisation.

PIACITELLI TECHNOLOGIES S.A.S. combines experience in design with spatial proximity. It guarantees our customers absolute discretion and privacy cooperating both in our customers offices and from our headquarters in Rivoli.

Our company supports customers in every phase of their project: from the drafting of the product specification to the feasibility analysis, the development of the project, the structural analysis, detailing of components, the creation of prototypes and their qualification. We guarantee our assistance during the start of the production and following the certification of products to final customer.

PIACITELLI TECHNOLOGIES S.A.S. operates in the major branches where it's necessary a complete or partial granting of the services linked to the development of the product, guaranteeing flexible time and design expenses.

## JTEAM

The value of training assumes great resonance in the field of professional growth. Precisely because it is related to the processes of change, transformation and strengthening of corporate systems, training must aim at the improvement and development of the person, profession and skills.

JTeam's experience is an innovative approach to acquisition of specific knowledge to fulfill platform demands. Purpose of JTeams experience is efficiency of project development and it is achieved through following fundamental steps:

1. Analysis of Client's request, project's operational field, expected duration of activities development.
2. Professional resources selection, through best academic and professional institutions in Turin area, famous for automotive excellency.
3. Training on specific project area, which is shared with Client's project platform, implemented using main drawing software suites and advanced design Dassault Systemes/Siemens. "Readiness method" is used, with typical workmanship methodologies of main worldwide "car makers". Selected teachers with proved and undisputed experience in automotive branch.
4. Controlled resources induction on design platform before tutor, until Jteam's assimilation in Client's development organization.
5. Tutor's direct support and periodical check, either physical or remotely, depending on need, to grant prearranged goals and efficiency targets, needed for project development.
